Soal 1	There are numeros consequences due to illegal activities in the foresty sector. Revenues lost by governments casued by illegal logging result in decrease of their ability to invest in the forestry sector. This han an effect on poverty levels, primarily because of the revenue lost by goverment. As result, reduces their financial capability as well as the programs that could be implemented to help the poor. Moreover, poor people are not in a postion to influence political bodies. This keeps them from accesing the forest resource. Finally the resources's ;ow cost contributes to an increase in waste and provides very little incentive to buy timber harvested from forests managed in a sustainble manner. Inadequate forests law enforcement and governance in other countries can also threaten sustainble forests management. As for direct negative consequences of illegal logging on the wood products industry, their effect is to simultaneously increase harvesting and increase the availability of timber, thus lowering the price for producers. The price decrease suffered by producers can lead to unfair competition, thus reducing the profitability of legal companies. Illegal loging is a disincentive to sustainable forests management. The illegal timber trade threatens not only the visibility of lrgal trade, but also its reputation. Despite the negative impacts, some stakeholders might benefit from illegal forest activities, such as consumers who could benefit from lower process and national industries that could increase their competitiveness by having access to lower timber prices Other more practice solutions are being put forward to reduce illegal loging and trade. Some if those solutions relate more to timber trade, there is no doubt that forest certification is seen, for some as tool; among many others, that enables control over the illegal wood trade., especially when it comes to the cain of custody. Also, there are other methods presently used or put forward to help combat illegal loging and illegal trade. They inculde log tracking systems, legality license-based verification system such as labeling, privat and public procurement policies, international coorporatiion and coordination in trade statistic, information exchanghe on illegal trade, an the study of possible trade-related measures. The paragraph following the passage will most likely discuss... A. solution details about timber-trade-related methods B. log certification processes for international markets C. parties involved instudies on trade-related measures D. examples of cases on methods in combating illegal logging E. explantion on log tracking and license verification systems

Soal 2	Text Opera refers to a dramatic art form, originating in Europe, in which the emotional content is conveyed to the audience as much through music, both vocal and instrumental, as it is through the lyrics. By contrast, in musical theater an actor's dramatic performance is primary, and the music plays a lesser role. The drama in opera is presented using the primary elements of theater such as scenery, costumes, and acting. However, the words of the opera, or libretto, are sung rather than spoken. The singers are accompanied by a musical ensemble ranging from a small instrumental ensemble to a full symphonic orchestra. It is pointed out in the reading that opera … A. has developed under the influence of musical theatre B. is a drama sung with the accompanied of orchestra C. is not a high-budget production D. is often performed in Europe E. is the most complex of all the performing arts
Soal 3	The most familiar speleothems (from the Greek word spelion for cave and thema for deposit), the decorative dripstone features found in caves, are stalacties and stalagmites, Stalacties hang downward from ceiling of the cave and are formed as drop after drop of water slowly trickles through cracks in the cave roof. Stalagmites grow upward from the floor of the cave, generally as a result of water dripping from an overhead stalactite. A colomn forms when stalactite and a stalagmite grow until they join . A "curtain" of "drapery" begins to form on an inclined ceiling when drops of water trickle along a slope. Natural openings on the surface that lead to caves are called sinkholes, or swallow holes. Streams sometimes disappear down these holes and flow through the cavern. Rivers may flow from one mountain to another through a series of caves. Some caverns have sinkholes in thier floors. Water often build up a rim of dripstone around the edge of the hole. Dripping water often contains dissolved minerals as well as acid. These minerals too will be deposited; and they may give rich coloring to the deposits. If minerals in the water change, layers of different colors may be formed.

	Stalagmites are formed by .... A. drops of water which enter through cracks in the ceiling. B. underground rivers which flow through the cave. C. water dripping from an overhead stalactite D. water which trickles down a slope. E. water which drops from the cloud
Soal 4	The most familiar speleothems (from the Greek word spelion for cave and thema for deposit), the decorative dripstone features found in caves, are stalacties and stalagmites, Stalacties hang downward from ceiling of the cave and are formed as drop after drop of water slowly trickles through cracks in the cave roof. Stalagmites grow upward from the floor of the cave, generally as a result of water dripping from an overhead stalactite. A colomn forms when stalactite and a stalagmite grow until they join . A “curtain” of “drapery” begins to form on an inclined ceiling when drops of water trickle along a slope. Natural openings on the surface that lead to caves are called sinkholes, or swallow holes. Streams sometimes disappear down these holes and flow through the cavern. Rivers may flow from one mountain to another through a series of caves. Some caverns have sinkholes in thier floors. Water often build up a rim of dripstone around the edge of the hole. Dripping water often contains dissolved minerals as well as acid. These minerals too will be deposited; and they may give rich coloring to the deposits. If minerals in the water change, layers of different colors may be formed. The word speleothem comes frome which language? A. Latin B. French C. German D. English E. Greek

Soal 5	Cheetahs are a species of cat best known for being the fastest land animal, with the ability to sprint at speeds of up to 120 kilometers per hour (75 miles per hour) and accelerate to 97 kilometers per hour (60 miles per hour) in as little as three seconds, making them faster than most sports cars. Cheetahs use their acceleration and speed to chase down and catch prey, like gazelles, on the sub-Saharan savannas where many of them live. Cheetahs have small heads, lean bodies, long legs, and a yellowish-tan coat with distinctive black spots. Cheetahs face extinction pressure from climate change, hunting by humans, and habitat destruction, which is reducing the size of their populations. Cheetahs' own genes also pose a challenge to their continued survival. Cheetahs have a low rate of reproductive success, meaning that as a species they are not always able to reproduce. With fewer offspring, the population can neither grow nor adapt to changes in the environment. There are various theories concerning cheetah evolution, including a popular one holding that cheetahs descended from the same ancestor as the American puma. About 10,000 to 12,000 years ago, around the end of the last ice age, an extinction event took place that wiped out many large mammal species around the world, including the wild cheetahs of North America and Europe. The extinction of these early cheetah species left only the Asian and African populations of cheetahs. Since then, they have faced pressure from climate change, habitat loss, and human activities. At the turn of the 19th century, more than 100,000 cheetahs are estimated to have been living in Africa, the Middle East, and elsewhere in Asia. Today, cheetahs are found in the wild in several locations in Africa, and a tiny population of another subspecies, the Asiatic cheetah, is found in Iran. Scientists estimate that fewer than 8,000 African cheetahs are living in the wild today and that there may be fewer than 50 Asian cheetahs left in the world. These data reflect an overall decline of about 50 percent in the last four decades, as well as a significant shrinkage in the historic range of the species. source: https://education.nationalgeographic.org/resource/cheetahs-brink-extinction-again Why has the cheetah population been confined to Asia and Africa? A. Due to the fact that cheetahs and pumas share a common ancestor B. Due to the pressure of climate change occurred in America and Europe C. Due to the evolutionary changes of cheetah approximately 12,000 years ago D. Because of the extinction catastrophe occurred during the last ice age E. Because of the high likelihood of survival of the Asian and African cheetah species

Soal 6	There are numeros consequences due to illegal activities in the foresty sector. Revenues lost by governments casued by illegal logging result in decrease of their ability to invest in the forestry sector. This han an effect on poverty levels, primarily because of the revenue lost by goverment. As result, reduces their financial capability as well as the programs that could be implemented to help the poor. Moreover, poor people are not in a postion to influence political bodies. This keeps them from accesing the forest resource. Finally the resources's ;ow cost contributes to an increase in waste and provides very little incentive to buy timber harvested from forests managed in a sustainble manner. Inadequate forests law enforcement and governance in other countries can also threaten sustainble forests management. As for direct negative consequences of illegal logging on the wood products industry, their effect is to simultaneously increase harvesting and increase the availability of timber, thus lowering the price for producers. The price decrease suffered by producers can lead to unfair competition, thus reducing the profitability of legal companies. Illegal loging is a disincentive to sustainable forests management. The illegal timber trade threatens not only the visibility of lrgal trade, but also its reputation. Despite the negative impacts, some stakeholders might benefit from illegal forest activities, such as consumers who could benefit from lower process and national industries that could increase their competitiveness by having access to lower timber prices Other more practice solutions are being put forward to reduce illegal loging and trade. Some if those solutions relate more to timber trade, there is no doubt that forest certification is seen, for some as tool; among many others, that enables control over the illegal wood trade., especially when it comes to the cain of custody. Also, there are other methods presently used or put forward to help combat illegal loging and illegal trade. They inculde log tracking systems, legality license-based verification system such as labeling, privat and public procurement policies, international coorporatiion and coordination in trade statistic, information exchanghe on illegal trade, an the study of possible trade-related measures. Which of the following best summarizes the passage ? A. Multi-national cooperation is required to flight illegal logging. B. illegal logging impacts a governments socially, economically, and politically C. Governmental and non-governmental organizations should flight illegal logging D. Various solutions on illegal logging should be implemented to result effectively E. Urgent solutions are needed to stop illegal logging with its multi-negative effects

Soal 7	On May 24 2018, the United Nations (UN) Security Council unanimously passed a resolution condemning the use of food insecurity and starvation as a tactic of war. It was the first time the Council had ever addressed the issue, acknowledging a threat to the lives of tens of millions of people. Aimed at countries currently engaged in international or civil wars, the resolution implores all parties to leave food stocks, farms, markets, and other distribution mechanisms intact. It demands parties in conflict permit humanitarian aid workers unimpeded access to populations in dire need and states that "using starvation of civilians as a method of warfare may constitute a war crime." Ending hunger and extreme food insecurity features among the UN's Sustainable Development Goals, adopted in 2015. Worldwide, the number of hungry and malnourished people had been declining for at least two decades but began rising after 2015. Experts believe conflicts and wars, along with weather events associated with climate change, are the main reasons for this setback. Among the 815 million people suffering from chronic malnutrition in 2016, 60 percent lived in areas affected by armed conflict. Wars are inherently violent and harmful, but destruction of resources can sometimes create more catastrophic harm than bombs and bullets. Warring parties may plunder an enemy's food supply, deliberately destroying farms, livestock, and other civilian infrastructure. Conflict can cause food shortages and the severe disruption of economic activities, threatening the means of survival of entire populations. Additionally, wars commonly trigger the displacement of huge numbers of people, cutting them off from their food supplies and livelihoods. Refugees are often vulnerable to acute food insecurity as well as disease. Alternately, if people remain in their homes, surrounding armies can trap people inside a village, city, or neighborhood and deprive them of food, medicine, and other vital resources until they surrender. Many conflict zones desperately need humanitarian aid, but increasingly, one or both parties in a conflict may block relief operations from reaching starving populations or even carry out attacks against humanitarian organizations. source: https://education.nationalgeographic.org/resource/hunger-and-war What is the primary demand of the resolution issued by the United Nations about hunger and food insecurity? A. Preventing conflicting parties from prohibiting humanitarian help B. Condemning the practice of threating the lives of those who engaged in war C. Allowing access for humanitarian aid workers explore the conflict zone D. Putting an end to the practice of utilizing famine as a military strategy E. Establishing rules stating that using starvation in war is a crime

Soal 8	Awarded the Nobel prize for physics in 1918, German physics Max Planck is best remembered as the originator of the quantum theory. His work helped user in a new era in theoretical physics and revolutionized the scientific community's understanding of atomic and sub-atomic processes. Planck intriduced an idea that led to the quantum theory, which became the foundation of twentieth century physics. In December 1900, Plnck worked out an equation that described the distribution of radiation accurately over the range of low to high frequencies. He had developed a theory which depended on a model of matter that seemed very strange at the time. The model required the emission of electromagnetic radiation in small chunks or particles. These particles were later called quantums. The energy associated with each quatum is measured by multiplying the frequency of the radiation, v, by a universal constant, h. Thus, energy, or E, equals hv. The constant, h, is known as Planck's constant. It is now recognized as one of the fundamental constant of the world. Planck announced his finding in 1900, but it was years before the full consequences of his revolutionary quantum theory were recognized. Throughout his life, Planck made significant contributions to optics, thermodynamics and stastistical mechanics, physical chemistry, and other fields. In 1930, He was elected president of the Kaiser Wilhelm society, which was renamed the Max II. Though deeply opposed to the fascist regime of Adolf Hitler, Planck remained in Germany throughout teh war. He died in Gottingen on October 4, 1947. "An idea" as used in line 4, refers to… A. A model of matter B. Emission of electromagnetic radiation C. Quantums D. The equation that described the distribution of radiation accurately over the range of low to high frequencies E. Biology

Soal 9	Long, long ago, when the gods and goddesses used to mingle in the affairs of mortals, there was a small kingdom on the slope of Mount Wayang in West Java. The King, named Sang Prabu, was a wise man. He had an only daughter, called Princess Teja Nirmala, who was famous for her beauty but she was not married. One day Sang Prabu made up his mind to settle the matter by a show of strength. After that, Prince of Blambangan, named Raden Begawan had won the competition. Unfortunately, the wicked fairy, Princess Segara fell in love with Raden Begawan and used magic power to render him unconscious and he forgot his wedding. When Sang Prabu was searching, Raden Begawan saw him and soon realized that he had been enchanted by the wicked fairy. The fairy could not accept this, so she killed Raden Begawan. When Princess Teja Nirmala heard this, she was very sad. So a nice fairy took her to the Kahyangan. Which one of the following statements is FALSE about Sang Prabu? A. Sang Prabu was a father of his only daughter B. Sang Prabu was a king of a kingdom in West Java C. Sang Prabu was taken to Kahyangan by a wicked fairy D. Sang Prabu was a wise man E. Sang Prabu didn't have a son
Soal 10	From : Mimi Syafiah;mimi@voctech.org Date : May 1st, 2015 Subject : SEAMEO Voctech [ID] confirmation Letter RTP on 14-26 May 2015 To : Tofan Sutrisno Dear Mr.Sutrisno Please give the attachment enclosed to all of the participants who will be attending the Regular Training Program on Developing an International Standard Quality Management System for Educational Institutions 14-26 May 2015 in Brunei Darussalam. Agendas will be discussed are as follows. 1. Scholarship Confirmation Letter, 2. The Scholarship Rules & Regulations, and 3. The Travel Advice

	Please submit us all participant's scanned passport detail soon or before 10 May 2015 for ticket bookings and Visa clearance. Please contact me if you have any further queries. Mimi Syafiah Training & Quality Assurance Division What do the participants of the event have to submit for Visa clearance? A. The most recent photograph B. Scanned passport details C. The latest TOEFL score transcripts D. Voctech's ID card number E. School certificate
Soal 11	One day in July 2005, I went fishing on Sodus bay. I casted under our own dock with a rubber worm and Boom! A big bass took off to the other side of the dock and I was sure the line was going to break because his pulling was rubbing line againts sharp rocks. Three times I pulled him back to my side of the dock and three times he got got back to the other side of the dock. Finally, I got him to my side and he was tired. I knew that this was the biggest bass I had ever seen. I worked him towards me and got down and gripped him. However, I didn't have a good trip at first and I let him down to the water for a few seconds to get a better grip. The next thing I knew he was swimming away. No! Screamed louder than I ever had. It was the first time I cried over a fish. What a huge fish. This is a true story and sad one for me. What happened after the writer could grip the big bass ? A. He picked the big bass up B. He cleaned the big bass up C. He laid down the big bass D. He stored the bid bass in his dock E. He lost the big bass

Soal 12	Photosynthesis is the prcess of converting solar energy to chemical energy and storing it bonds of sugar. This process occurs in plants and some algae (Kingdom Protista). Plants need only solar energy, CO2 and H20 to make sugar. The process of photosynthesis takes in the chloroplasts, specifically using chlorophyll, the green pigment involved in photosynthesis. Photosynthesis takes place primarily in plant leaves, and little to none occurs in stern, etc. The part of typical leaf include the upper and lower epidermis , the mesophyll, the vascular bundle(s) (venis), and the stomates. The upper and lower epidermal cells do not have chloropalsts, thus photosynthesis does not occurs there. They serve primarily as protection for the rest of the leaf. He stomates are holes which occur primarily in the lower epidermis and are for air exchange : they let CO2 in and O2 out. The vascular bundles or veins in a leaf are part of the plant's transportation system, moving water and nutrient around the plant as needed. The mesophyll cells have chloroplasts and this is where photosynthesis occurs. As you hopefully recall, the parts of chloroplast include the outer and inner membranes, intermembrane space, stroma, and thylakoids stacked in grana. The chlorophyll is built into the membrane of the thylakoids. Chlorophyll looks green because it absorbs the red and blue light, making these colors unavailable to be seen by your eyes. It is the green light which is not absorbed that finally reaches our eyes, making chlorophyll appear green. However, it is the energy from the red and blue light that are absorbed that is, thereby, able to be used to do photosynthesis. The green light we can see is not/cannot be absorbed by the plan, and thus cannot be used to do photosynthesis. What is the function of the upper and lower epidermis ? A. To let CO2 in and O2 out B. To enable photosynthesis C. To absorb leaf green lights D. To protect the rest of the leaf E. To transport the nutrient

Soal 13	Bioengineering which is a process in which a set of genes from one plant is a hot topic for debate days. Those who are in favor of bioenginerring say that bioengineering could lead to bigger crop yields and 'new and improve' fruit and make it possible to grow the most desirable crops. In addition, they look at bioenginnering as a high -tech version of cross pollination, which happens naturally with certain types of plants. However, those who are against bioengineering say that there may be dangers of genetically altered food. There isno telling what the long-term effects of bioengineering. Furthermore, they add that because it is difficult to control cross-pollination when genetically modified crops interbreed with conventional crops. There is also the risk that some of native or non-modified species would be extinct. We have no idea how bioengineering would impact not only the people who eat the crops, but also the wildlife that feeds on them and the environment as a whole. The communication purpose of the text is to… A. Explain about bioengineering B. Give information about bioengineering C. Present two different opinion about bioengineering D. Tell the readers that bioengineering is absolutely good E. Give comment to the people whoare in favor of bioengineering
Soal 14	After lunch Ratu took her bike and sneaked quietly into the yard. She moved carefully to the plot of soil under the oak of the house as she checked to see that nobody watched her. She leaned her bicycle against the tree and bent down. All around dark clouds rumbled noisy in the sky; a streak of yellow zigzagged far away, and she trembled. Digging swiftly in the hot earth she made a small hole and in an instant took a crushed ten-dollar bill from her pocket. After she slipped the money into the ground and covered it, she breathed deeply and smiled. She was glad that was over! Now no one would find it or know how she got it. Certainly it would be there later when she wanted it. After she hides the money, Ratu feels…. A. Very guilt and sorry B. Tired C. That someone saw her D. Free E. Relieved

Soal 15	Swanson Inc.222 Islington Avenue Toronto – Canada November 25 Ms. Ursula Schelling A-1010, Vienna Austria Dear Ms. Schelling, Thank you for your interest in Swanson Incorporated. Leslie Peterson and I enjoyed meeting with you at the International Conference in Atlanta last month. I'm sorry to say that the position for which you applied has already been filled. However, we will keep your resume on file for future positions. Sincerely, Sheila Hawks Director of Human Resources "The position for which you applied has already been filled." We can infer from the sentence that... A. it's hard to find a prospective job nowadays B. the applicant's qualification is poor C. the job is already given to someone D. the position is going to be informed
Soal 16	Once, a hunter lived a village. He used to boast of his brave hunting trips to the villagers. The villagers respected him a lot. He mostly told everyone how he had fought a lion bare-handed. He said that the tiny animals used to get scared even at the sight of him. One day, the hunter was passing through a forest. He met a woodcutter from the same village. The boastful hunter approached him and said, "How are you? it's a fine day, isn't it?" "Yes,yes,indeed!" the woodcutter replied. "Well, can you tell me if you have seen some footprints of the lion nearby? it's

	been months since I defeated any." The woodcutter knew that the hunter only boasted, so he said, "Yes, a lion is in a nearby then. Can I take you there?" The scared hunter said, "No … No … I only just wanted to see his footprints." Finally, the boastful hunter ran away from the spot What did the hunter boast about himself? A. Someone defeated him. B. He was the smartest man. C. He was the strongest man. D. He was the most courageous man. E. Nobody defeated him
Soal 17	The integration of techonolgy and media can enhance early childhood practice. Successful integration of technology and media into early childhood programs involves the use of resources such as computers and the internet in daily classroom practices. True integration occurs when the use of technology and media becomes routine and transparent — when the focus of a child or educator is on the activity or exploration itself and not on the technology or media being used. Technology integration has been successful when the use of technology and media supports the goal of educators and programs for children, provides children with digital tools for learning and communicating and helps improve child outcomes. As the lives of children, parents, families and educators are infused with technology and media, early childhood classrooms can benefit from the possibilities of extending children's learing through judicious use of these tools. As part of the overall classroom plan, technology and interactive media should be used in ways that support exiting classroom development and educational goals rather than in ways that distort or replace them. For example, drawing on a touch screen can add to children's graphic repsentational experiences; manipulating colorful acetate shapes on a light table allows children to explore color and shape. By focusing in technology and interactive media as tools— not as ends in and of themselves— teachers can avoid the passive and potentially harmful use of non-interactive, linear screen media that is inappropriate in early childhood settings. Intentionally is a key to developmentally apporopriate use. Exciting new resources in today's technology-rich world represent the next frontier in digital learning for our youngest citizent, leaving it to talented educators and caring adults to determine how best to leverage each new technology as an opportunity for children's learning in ways that are developmentally appropriate. Which paragraph(s) explain(s) the importance of using technology and media wisely so that it can support existing classroom practice?

	A. 1 B. 2 and 3 C. 2 and 4 D. 3 and 4 E. 4
Soal 18	Cement isn't something most people notice, even though we all depend on it every day. The most common type of cement is called Portland cement, or OPC (ordinary Portland cement). Portland cement is used to bind concrete, an essential component of roads, bridges, and buildings. Cement production is also a big contributor to global warming. Manufacturing Portland cement requires heating limestone to 1,449 degrees Celsius (2,640 degrees Fahrenheit). The heating process uses fossil fuels, which release massive amounts of carbon dioxide into the atmosphere. Carbon build-up in the Earth's atmosphere causes global warming. A company called Calera believes it has figured out a way to make cement that stores carbon instead of releasing it into the atmosphere. Calera combines flue gas released from power plants with seawater to make cement. This method of carbon storage is called carbon sequestration. Today, Calera has a prototype plant in Moss Landing, on the coast of Monterey Bay, California. Flue gas from the natural gas facility is pumped into Calera's cement plant. The flue gas, filled with carbon dioxide, is combined with seawater from nearby Monterey Bay. Seawater contains calcium, magnesium, and other minerals, the same ingredients corals use to build reefs. Carbon dioxide from the flue gas and minerals in the seawater combine to make calcium carbonate. Calcium carbonate is the material that makes up coral reefs, as well as Portland cement. The process of making calcium carbonate cement from carbon dioxide and seawater is called Mineralization via Aqueous Precipitation, or MAP. After the cement is made, the heat from the flue gas is used to dry the cement into powder. Calera plans to desalinate and sell the leftover seawater. The idea for MAP was developed by Brent Constantz, one of the co-founders of Calera. As a graduate student at the University of California at Santa Cruz, Constantz observed how corals used carbon dioxide to make reefs. He thought that if corals could make cement this way, then perhaps humans could do it, too. source: https://education.nationalgeographic.org/resource/working-with-nature-to-slow-global-warming

	Which of the following is NOT TRUE about the process of cement making in Moss Landing prototype plant? A. Carbon dioxide is combined with seawater to build reefs B. Calcium carbonate cement is made using flue gas and seawater C. The combination process takes place at Calera's cement plant D. Minerals from seawater are used to produce ecofriendly cement E. The excretion gas is transported into Calera's cement plant
Soal 19	The sun is the closest star to Earth. Even at a distance of 150 million kilometers (93 million miles), its gravitational pull holds the planet in orbit. It radiates light and heat, or solar energy, which makes it possible for life to exist on Earth. Plants need sunlight to grow. Animals, including humans, need plants for food and the oxygen they produce. Without heat from the sun, Earth would freeze. There would be no winds, ocean currents, or clouds to transport water. Solar energy has existed as long as the sun—about 5 billion years. While people have not been around that long, they have been using solar energy in a variety of ways for thousands of years. Solar energy is essential to agriculture—cultivating land, producing crops, and raising livestock. Developed about 10,000 years ago, agriculture had a key role in the rise of civilization. Solar techniques, such as crop rotation, increased harvests. Drying food using sun and wind prevented crops from spoiling. This surplus of food allowed for denser populations and structured societies. Early civilizations around the world positioned buildings to face south to gather heat and light. They used windows and skylights for the same reason, as well as to allow for air circulation. These are elements of solar architecture. Other aspects include using selective shading and choosing building materials with thermal mass, meaning they store heat, such as stone and concrete. Today, computer programs make applications easier and more precise. The greenhouse is another early solar development. By converting sunlight to heat, greenhouses make it possible to grow plants out of season and in climates that may not be suited for them. One of the earliest greenhouses dates to 30 CE, before glass was even invented. Constructed from translucent sheets of mica, a thin mineral, it was built for the Roman emperor Tiberius, who wanted to be able to eat cucumbers all year. The general technique is the same today, although there have been many improvements to increase the variety and amount of crops grown. source: https://education.nationalgeographic.org/resource/power-sun

	According to the passage, how close is the sun to Earth? A. It is 93 million kilometers away B. It is 150 million miles away C. It is the closest planet to the sun D. It is the nearest star to Earth E. It is as close as Earth's orbital path
Soal 20	Wetlands are areas of land that are covered by water, or have flooded or waterlogged soils. They can have water on them either permanently or for just part of the year. Whether it's year-round or seasonal, this period of water saturation produces hydric soils, which contain little or no oxygen. But this doesn't mean that they are lifeless: Wetlands are full of unique water-loving plants and wildlife that have adapted to wet environments. Wetlands can take many different forms, depending on the local climate, water conditions and land forms and features. For example, swamps are dominated by woody trees or shrubs. Marshes often have more grass-like plants, such as cattails and bulrushes. Bogs and fens are areas that accumulate peat – deposits of dead and partly decomposed plant materials that form organic-rich soil. Wetlands are important environments for many reasons. They provide ecological services whose value has been estimated to be worth more than US$47 trillion per year. For example, wetlands support very high levels of biodiversity. Scientists estimate that 40% of all species on Earth live or breed in wetlands. Wetlands are critical homes or stopovers for many species of migratory birds. In the central U.S. and Canada, for example, wetlands in the so-called prairie pothole region on the Great Plains support up to three-quarters of North America's breeding ducks. Along with providing important habitat for everything from microbes to frogs to waterfowl, wetlands also work to improve water quality. They can capture surface runoff from cities and farmlands and work as natural water filters, trapping excess nutrients that otherwise might create dead zones in lakes and bays. Wetlands can also help remove other pollutants and trap suspended sediments that cloud water bodies, which can kill aquatic plants and animals. Because wetlands are often in low-lying areas of the landscape, they can store and slowly release surface water. Wetlands can be extremely important for reducing the impacts of flooding. In some places, water entering wetlands can also recharge groundwater aquifers that are important for irrigation and drinking water. Wetlands also act as important carbon sinks. As wetland plants grow, they remove carbon dioxide from the atmosphere. They die, sink to the bottom of the wetland and decompose very slowly. Over time, the carbon they contain accumulates in wetland soils, where it can be stored for hundreds of years. Conserving and restoring wetlands is an important strategy for regulating greenhouse gases and mitigating the impacts of climate change.

	source: https://theconversation.com/what-is-a-wetland-an-ecologist-explains-191495 According to the text, how can wetlands prevent flood? A. It slowly detach water surface B. It may retain surface water C. It can absorb water sources D. It help reducing groundwater E. it recharges wetlands soils
Soal 21	Put simply, globalization is the connection of different parts of the world. In economics, globalization can be defined as the process in which businesses, organizations, and countries begin operating on an international scale. Globalization is most often used in an economic context, but it also affects and is affected by politics and culture. In general, globalization has been shown to increase the standard of living in developing countries, but some analysts warn that globalization can have a negative effect on local or emerging economies and individual workers. Globalization is not new. Since the start of civilization, people have traded goods with their neighbors. As cultures advanced, they were able to travel farther afield to trade their own goods for desirable products found elsewhere. The Silk Road, an ancient network of trade routes used between Europe, North Africa, East Africa, Central Asia, South Asia, and the Far East, is an example of early globalization. For more than 1,500 years, Europeans traded glass and manufactured goods for Chinese silk and spices, contributing to a global economy in which both Europe and Asia became accustomed to goods from far away. Following the European exploration of the New World, globalization occurred on a grand scale; the widespread transfer of plants, animals, foods, and ideas became known as the Columbian Exchange. The Triangular Trade network in which ships carried manufactured goods from Europe to Africa, enslaved Africans to the Americas, and raw materials back to Europe is another example of globalization. The resulting spread of slavery demonstrates that globalization can hurt people just as easily as it can connect people. Not everything about globalization is beneficial. Any change has winners and losers, and the people living in communities that had been dependent on jobs outsourced elsewhere often suffer. Effectively, this means that workers in the developed world must compete with lower-cost markets for jobs; unions and workers may be unable to defend against the threat of corporations that offer the alternative between lower pay or losing jobs to a supplier in a less expensive labor market. source: https://education.nationalgeographic.org/resource/effects-economic-globalization

	According to the passage, how does globalization affect individual workers? A. It creates a lower-cost labor market, making it difficult for worker unions to defend their own rights B. It provides an option for individual workers to work for outsourced jobs elsewhere or for local businesses C. It reduces the scope of the job market, causing global workers who rely on local jobs to suffer D. It produces winners and losers, so it brings workers together to defend against the threat of corporation E. It allows corporations to hire outsourced labor, forcing local workers to compete harder for jobs
Soal 22	*Hi, my name's Aldo. I love football, I am a great fan of AC Milan. I have also been interested in cars since I was a child. I'm crazy about driving and I also enjoy fixing cars. When I was ten, I had many toy cars. I would play with them, repair the ones my friends broke. I also used to help my dad fix his car. So, eventually I decided to become a mechanic and open up my own shop. My parents are happy with my choice, too. They think it's important that I pursue a carrier that I like. I have a bright career now and I really enjoy it. I'm planning to get married soon. My girlfriend is also interested in cars. Who knows, maybe we can run the car shop together with our kids in the future.* Aldo has been interested in cars since... A. 2007 B. he was born C. his started driving D. very young age E. 18 years old
Soal 23	Today, anyone with an internet connection can create and share deceptive content — from outright false information to a more underhanded distorting of facts. Considering the vastness of the internet, and since protecting freedom of speech is paramount, online misinformation is an immense challenge to legislate away. This has been an especially large problem amidst the ongoing COVID-19 pandemic, where false and unsubstantiated claims about the nature of the virus spread rapidly and widely. Global misinformation campaigns targeting the safety and efficacy of vaccines have fuelled growing anti-vaccine rhetoric, stalling vaccination rates and causing preventable death. This has illustrated the imminent threat misinformation poses to the functioning of our institutions, and to society as a whole.

	While misinformation itself is not new, the internet provides unprecedented reach for spreading it. Between 2014 and 2017, Russian content creators produced tens of thousands of pieces of false and modified content, reaching over 126 million American Facebook users alone. Twitter has similarly dealt with a record amount of "fake news" in recent years, resulting in thousands of legal demands for content removal from governments worldwide. Efforts to remove and label misinformation on social media platforms may help, but a more pertinent question is whether these efforts can match the rapid pace of misinformation spread. In response to the growing pressure to control misinformation on their platforms, social media giants have generally relied on reactively removing or labelling false content after it's widely noticed and reported. In the time this process takes, research has shown that fake news spreads farther and faster than truthful content. Misinformation is often perceived as "novel" and "sensational," which swiftly grabs attention and gets viewed and shared more readily. This is currently happening with the conflict in Ukraine, where several shocking images falsely claiming to show current events quickly reached hundreds of thousands of views on Twitter before being removed. Labelling or removing content from these platforms forces companies to navigate the blurry lines of what constitutes false or misleading content, and what should be protected as freedom of expression. source: https://theconversation.com/in-order-to-be-saved-from-misinformation-we-need-to-be-exposed-to-it-175984 According to the passage, why is it so difficult to control online misinformation? A. Because people have easy access to internet and deceptive contents B. Due to the fact that the internet is immense and free expression is vital C. Due to the fact that a lot of information are distorted and shared easily D. Due to the fact internet users are free to share their thoughts online E. Because people are not aware of the abundance of online misinformation
Soal 24	Read the following the text, then choose the correct answer by crossing A, B, C, D OR E! Text (1) Sometimes experience in other countries can help people to understand their own identity better. Mahatma Gandhi was born in 1869 at Portandar in Western India. After studying in India, he dreamt of going to England to study. He was told that his Hindu religion did not allow voyages abroad. However, Gandhi was very determined and he finally left for England in 1887. At first, he tried to learn to behave like an English gentleman, but he soon learnt that it was better to be himself. He studied law in London, qualifying in 1891. He also learnt about other religions.

	(2) He returned home to India and worked as a lawyer for two years. After some problems, he was offered a job in South Africa. Here he experienced racism as a member of the Indian community. He decided to fight for the rights of Indians using "passive resistance. He had three main beliefs, namely non-violence, religious tolerance and truth. When he finally returned to India in 1915, he became a great political leader. During the fight for independence, he was often put in prison, but his beliefs never changed. (3) Gandhi had studied in Britain, so he understood the British better that they understood him. Gandhi's leadership led to independence, but, on Independence Day, 15th August, 1947, Gandhi refused to celebrate. He was in favor of Hindu-Muslim unity, but Muslims and Hindus could not agree. so a separate Muslim state was formed in Pakistan. In 1948, Gandhi started fasting to death as a protest against fighting between India and Pakistan. He was assassinated by a Hindu fanatic on 30th January 1948. India and Pakistan are still fighting in Kashmir today. The fight for independence was a difficult one, but not as difficult as the fight for non-violence, religious tolerance, and truth. The passage above mainly deals with Mahatma Gandhi's.... A. search for principles of his three main beliefs B. fighting against racism in South Africa C. political career as an important national leader D. experience to identify his life principles E. political struggle for India's independence
Soal 25	When you think of "currency," you are probably thinking of the cash you hand over at a store, or the credit cards or money transfers that can be used in place of physical money. In general, currency is a system of money backed by a government. Typically made up of coins and paper notes, currency is a medium of exchange, meaning that it is the basis for various kinds of trade and transactions. As technology has grown more sophisticated, digital currencies (which have no physical form) have grown as more financial transactions have gone online. Digital currency is simply a payment method that does not exist outside of its electronic form. Within the past decade, a new particularly popular kind of digital currency has emerged: cryptocurrency. Although this new system is unlikely to replace the more traditional forms of currency any time soon, it has made a significant impact in less than 10 years. The prefix "crypto" originally comes from the Greek word meaning "hidden." This does not mean that cryptocurrency is secret, but rather that this "hidden" money is digital, and is kept secure with digital-code encryption. These digital currencies are the heart of systems that allow secure, direct payment for online transactions. "Crypto-" actually refers to the cryptographic data encryption that keeps the transactions protected from hackers or other digital eyes. It also makes

	cryptocurrency difficult to counterfeit. Cryptocurrency has gained popularity because it offers a straightforward way to transfer funds entirely online, without involving third parties like banks or credit card companies (and paying the fees they often charge for processing transactions). Instead of physical coins or paper notes, cryptocurrencies have digital "tokens," or different digital denominations (think of one- or five-dollar bill, etc.). For example, one bitcoin is equivalent to 100,000,000 satoshis, the smallest denomination of a bitcoin and named for bitcoin's supposed inventor, Satoshi Nakamoto. This enables transactions smaller than a full coin. The transfer of funds involves "public" and "private" keys, which are lines of code that need to match on both sides, so the transaction can be completed. Cryptocurrency is saved in the user's "wallet," or a URL or internet account address that can only be accessed by the owner. The wallet has a public key, and the private key is used to sign a transaction, much like you would sign a check or a credit card slip. source: *https://education.nationalgeographic.org/resource/digital-currency* According to the passage, what keeps cryptocurrency safe? A. It is kept hidden from view by any other digital eyes B. It is encrypted by secret codes generated by computers C. It safeguards financial transactions against cybercriminals D. It prevents other parties from gaining unwanted access E. It is concealed through one forms of digital currency
Soal 26	A glacier is a huge mass of ice that moves slowly over land. The term "glacier" comes from the French word glace (glah-SAY), which means ice. Glaciers are often called "rivers of ice." Glaciers fall into two groups: alpine glaciers and ice sheets. Alpine glaciers form on mountainsides and move downward through valleys. Sometimes, alpine glaciers create or deepen valleys by pushing dirt, soil, and other materials out of their way. Alpine glaciers are found in high mountains of every continent except Australia (although there are many in New Zealand). The Gorner Glacier in Switzerland and the Furtwangler Glacier in Tanzania are both typical alpine glaciers. Alpine glaciers are also called valley glaciers or mountain glaciers. Ice sheets, unlike alpine glaciers, are not limited to mountainous areas. They form broad domes and spread out from their centers in all directions. As ice sheets spread, they cover everything around them with a thick blanket of ice, including valleys, plains, and even entire mountains. The largest ice sheets, called continental glaciers, spread over vast areas. Today, continental glaciers cover most of Antarctica and the island of Greenland. Massive ice sheets covered much of North America and Europe during the Pleistocene time period. This was the last glacial period, also known as the Ice Age. Ice sheets reached their greatest size about 18,000 years ago. As the ancient

	glaciers spread, they carved and changed the Earth's surface, creating many of the landscapes that exist today. During the Pleistocene Ice Age, nearly one-third of the Earth's land was covered by glaciers. Today, about one-tenth of the Earth's land is covered by glacial ice. Glaciers begin forming in places where more snow piles up each year than melts. Soon after falling, the snow begins to compress, or become denser and tightly packed. It slowly changes from light, fluffy crystals to hard, round ice pellets. New snow falls and buries this granular snow. The hard snow becomes even more compressed. It becomes a dense, grainy ice called firn. The process of snow compacting into glacial firn is called firnification. source: *https://education.nationalgeographic.org/resource/glacier-moving-rivers-ice* According to the passage, the term firn refers to…. A. hard and round ice pellets B. light and fluffy snow crystal C. dense and grainy hard ice D. the process of compacting snow E. the process of glacier forming
Soal 27	Read the following the text, then choose the correct answer by crossing A, B, C, D OR E! Text (1) The mountains of worn-out tires in these dumps present a number of health and environmental dangers. First, they attract rats and mosquitoes, which then spread disease among humans. The tires can also catch on fire, and these fires are very difficult to extinguish. They may burn from a few days to a few months. While the tires burn, they release cancer-causing gases into the air. These gases spread over nearby towns and cause health problems for people who live there. (2) After a tire dump fire is put out, pieces of burned tires remain on the ground. When it rains, chemicals from the burned parts wash into the soil and into the ground water. This pollutes the soil and the drinking water in the area. (3) Aside from these problems, the tire dumps represent a terrible waste of resources. Therefore, in order to avoid the problems and the waste, people are looking for ways to recycle or reuse tires. Recycling is common for other materials, such as paper, glass, and aluminum. Now tires are also being reused in a number of creative ways. (4) One solution is to burn the tires to create energy. An energy company with plants in California and Connecticut burns tires to produce steam for generating

	electricity. When the tires are burned properly, the fire does not pollute the air. Every day, workers check to make sure that no dangerous gases are allowed out of the energy plant's chimneys. A total of about 15 million tires are burned every year in the company's two plants. This produces enough electricity to supply about 42,000 houses. It can be inferred from the passage that a fire at a tire dump is .... A. a good source of electricity B. a good way to get rid of old tires C. a way of saving resources D. a source of dangerous pollution E. quickly put out
Soal 28	Read the following the text, then choose the correct answer by crossing A, B, C, D OR E! Text (1) Scientists are as obsessed with the question of why the super old survive and thrive as Ponce de Leon was to find the Fountain of Youth. They want to understand why the Japanese islands of Okinawa are home to the world's largest population of centenarians, with almost 60 or its 1,3 million inhabitants living into their second century-many of them active and looking decades younger than their actual years. Like weekend visitors on the summer ferry to Martha's vineyard, scientists and sociologists block the boats to Sardinia and Nova Scotia, Canada, to see why those craggy locales hide vast clusters of the super old. (2) As well as studying these populations intensively to unlock their secrets. Scientist have also taken a hard look at the very old in the U.S., most notably in the New England Centenarian Study, led by Dr. Thomas their longevity. "I never took a drink", "I drank a shot of whiskey every day."-experts are trying to unravel and understand the biological factors that allow some people to reach 100 while others drop off in their 70s or 80s Researchers are particularly interested in determining which factors allow up to 30% of those who reach 100 to do so in sufficient mental and physical health: a whopping 90% of centenarians, according to Perls, remain functionally independent up to age 92. (3) It is pretty obvious even non-scientists that how you get their depends partly on the genes you are born with and partly on lifestyle-what and how much you eat, where you live and what types of stress and trauma you experience. How much depends on each factor through was unknown until Swedish scientists tackled the problem in 1998. They did it by looking at the only 20 set of people who share genes but not lifestyle: identical twins who were separated at birth and reared apart. If genes were most important, you would expect the twins to die at about the same age. In fact, they do not, and the average difference convinced the scientists that only about 20% to 30% of how long we live is genetically deter-mined. The dominant factor is lifestyle.

	How is the information of the last paragraph in the text organized? A. Each question is provided with an illustration B. Scientific question are followed by studies C. Scientific questions are presented from general to specific D. Each study is followed by research finding E. Three related question are followed by one finding.
Soal 29	Read the following the text, then choose the correct answer by crossing A, B, C, D OR E! Text (1) If droughts, floods and wildfires are the criminal, climate change is the accomplice. This is how the population must begin regarding global warming, experts said at a session at the annual American Academy for the Advancement of Science meeting here. Although extreme weather events, from the creeping drought that scorched last years' corn crop to Superrstorm Sandy, are worrisome, automatically and simplistically tying them to the scientific phenomenon of climate change could be misleading. (2) Last year's drought in Texas, for example, could not be specifically tied to eliminate change, said John Nielsen-Gammon, the Lone star State's climatologist. Over the past century there has been an increase in rainfall -not a tendency toward dryness over most of Texas by about 10 percent. "Changing climate has not contributed to the lack of rainfall over the long term, as of yet," he said. Last year's drought much like the famed Dust Bowl drought of the 1930s and another significant drought in the 1950s, is tied to rising sea surface temperatures in the Pacific Ocean the weather event known as la Nina. "Until we see a long-term decrease in rainfall in Texas, it will be hard to say that climate change has caused a decrease," Nielsen-Gammon said. (3) Temperatures have rind in Texas, meaning the increased rainfall is being evaporated at a more rapid rate, he added. But for the drought, which continues to seize more than half of the lower 48 states, het was a drought accelerant but not the main cause. Adapted from www.scintificamerican.com. Paragraphs 1 and 2 are related in that they... A. Predict climate changes causal to the lack of rainfall B. Offer horrible climate changes to temperature increases C. Discuss droughts which have no link to climate changes D. Present extreme weather events which frequently turn up E. Explicate that people have been wrong on climate changes

Soal 30	A glacier is a huge mass of ice that moves slowly over land. The term "glacier" comes from the French word glace (glah-SAY), which means ice. Glaciers are often called "rivers of ice." Glaciers fall into two groups: alpine glaciers and ice sheets. Alpine glaciers form on mountainsides and move downward through valleys. It slowly changes from light, fluffy crystals to hard, round ice pellets. New snow falls and buries this granular snow. The hard snow becomes even more compressed. It becomes a dense, grainy ice called firn. The process of snow compacting into glacial firn is called firnification. source: *https://education.nationalgeographic.org/resource/glacier-moving-rivers-ice* Which of the following can be inferred from the fourthh paragraph about the Ice Age? A. It only affected land areas of America and Europe B. It was the initial origin of glaciers' existence on Earth C. It covered half Earth's land with glaciers during its time D. It was happened around 18,000 years ago E. It formed all of the Earth's land sceneries

Soal 31

Social media influencers are individuals who utilize social media platforms to build their own personal brand or influence their followers to act (including buying products, supporting a brand, or vacationing in a certain location). They can share anything from clothes and beauty products to make-at-home slime with their followers. While it might seem like frivolous fun, some influencers are making significant amounts of money from their connection to their fans, making them the modern entrepreneur. While not every social media influencer is an entrepreneur, the ones who have started their own businesses from the brand they created online have much in common with traditional entrepreneurs when it comes to driving the economy.

Entrepreneurs are people who organize, manage, and take on the risks of a business. They often start a new business in response to a perceived need for a good or service. An influencer, on the other hand, is someone who has the power to affect or change people and their behavior through social media—often to get them to buy something. Influencers who start their own business certainly fall under the first part of the definition of entrepreneur, as they are managing their business and taking on risk. But are they fulfilling a need? Many say yes: companies can target highly specific groups of people through employing an influencer—groups that might be missed by traditional advertising. And because influencers form a more personal relationship with their followers, the followers are seemingly more likely to buy what the influencer suggests.

One area where entrepreneurs and influencers differ the most is in their processes of starting a business. Nearly all traditional businesses have startup costs, which go toward buying materials to create goods, equipment to manufacture items or provide a service, or office space. But entrepreneurs do not always have to put their own savings into a business. They can get venture capital, or money to start or grow a business, from outside investors, often in exchange for part ownership of the company. Influencers, on the other hand, have fewer startup costs, though it can vary by the influencer's specialty. Beauty and fashion influencers may have to get new clothes, buy the latest makeup, and hire a professional photographer to start out, but others only need their social media accounts and a smartphone. Additionally, many of the costs that apply to starting a business do not apply to influencers, like renting office space, as many works from home.

source: https://education.nationalgeographic.org/resource/influencers-modern-entrepreneur

It is implied in the third paragraph that entrepreneurs….

A. must always spend their personal fund to grow their business

B. may collaborate with investors to fund the corporate expenses

C. may split their ownership of the business with a group of consumers

D. can expand their company by putting their own saving in the business

E. can expand the company's startup cost to increase external investment

Soal 32	The term plantation arose as settlements in the southern United States, originally linked with colonial expansion, came to revolve around the production of agriculture. The word plantation first appeared in English in the 15th century. Originally, the word meant to plant. However, what came to be known as plantations became the center of large-scale enslaved labor operations in the Western Hemisphere. Historians Peter H. Wood and Edward Baptist advocate to stop using the word plantation when referencing agricultural operations involving forced labor. Instead they suggest calling these places “labor camps” or “slave labor camps.” The plantation system developed in the American South as British colonists arrived in what became known as Virginia and divided the land into large areas suitable for farming. The land on which these plantations were established was stolen through canceled, disregarded, and deceitful treaties, or outright violence towards indigenous nations. The plantation system came to dominate the culture of the South, and it was rife with inequity from the time it was established. In 1606, King James I formed the Virginia Company of London to establish colonies in North America, but when the British arrived, they faced a harsh and foreboding wilderness, and their lives became little more than a struggle for survival. So, to make settling the land more attractive, the Virginia Company offered any adult man with the means to travel to America 50 acres of land. At the encouragement of the Company, many of the settlers banded together and created large settlements, called hundreds, as they were intended to support 100 individuals, usually men who led a household. The hundreds were run as private plantations intent on making a profit from the cultivation of crops, which the economy of the South depended on. The climate of the South was ideally suited to the cultivation of cash crops. Unlike small, subsistence farms, plantations were created to grow cash crops for sale on the market. The plantation system was an early capitalist venture. England’s King James had every intention of profiting from plantations. Tobacco and cotton proved to be exceptionally profitable. source: https://education.nationalgeographic.org/resource/plantation-system In the first paragraph, the author implies that the term plantation…. A. had experienced a shift in meaning B. was originally associated with agriculture C. first appeared in the late 14th century D. was invented by Historian Peter H. Wood E. had been changed into a more specific term

Soal 33	Read the following the text, then choose the correct answer by crossing A, B, C, D OR E! Teks (1) That placebos can cure everything from dandruff to leprosy is well known. They have a long history of use by witch doctors. faith healers, and even modem physicians, all of whom refuse to admit their efficacy Modern distribution techniques can bring this most potent of medicines to the aid of everyone, not just those lucky enough to receive placebos in a medical testing program (2) Every drug tested would prove effective if special steps were not taken to neutralize the placebo effect. This is why drug tests give half the patients the new medication and half a harmless substitute These tests prove the value of placebos because approximately five percent of the patients taking them are cured even though the placebos are made from substances that have been carefully selected to be useless. (3) Most people feel that the lucky patients in a drug test get the experimental drug because the real drug provides them a chance to be cured. Yet analysis shows that patients getting the placebo may be the lucky ones because they may be cured without risking any adverse effects the new drug may have. Furthermore, the drug may well be found worthless and to have severe side effects. No harmful side effects result from placebos. (4) Placebos regularly cure more than five percent of the patients and would cure considerably more if the doubts associated with the tests were eliminated. Cures are principally due to the patient's faith, yet the patient must have doubts knowing that he may or may not be given the new drug, which itself may or may not prove to be an effective drug. Since he knows the probability of being given the true drug is about fifty percent, the placebo cure rate would be more than doubled by removing these doubts if cures are directly related to faith (5) The actual curing power of placebos probably stems from the faith of the patient in the treatment. This suggests that cure rates in the ten percent range could be expected if patients are given placebos under the guise of a proven cure, even when patients know their problems are incurable. It may take a while to reach the ten percent level of cure because any newly established program will not have cultivated the word-of-mouth advertising needed to insure its success One person saying "I was told that my problem was beyond medical help, but they cured me, can direct countless people to the treatment with the required degree of faith Furthermore, when only terminal illnesses are treated, those not cured tell no one of the failure (6) Unfortunately, placebo treatment centers cannot operate as nonprofit businesses. The nonprofit idea was ruled out upon learning that the first rule of public medicine is never to give free medicine Public health services know that medicine not paid for by patients is often not taken or not effective because the recipient feels the medicine is worth just what it cost him. Even though the patients would not know they were taking sugar pills, the placebos cost so little

	that the patients would have no faith in the treatment. Therefore, though it is against higher principles, treatment centers must charge high fees for placebo treatments. This sacrifice of principles. However, is a small price to pay for the greater good of the patients. According to the passage, the main idea of the text is … A. Placebo treatment is a proven tool of modern medicine and its expanded use would benefit society's health. B. Because modern technology allows for distribution of drugs on a massive scale, the proven efficacy of the placebo is no longer limited to a privileged few. C. The curative power of the placebo is so strong that it should replace proven drugs because the patients receiving the placebo will then be cured without risking any adverse side effects. D. The price of placebo treatment must be kept artificially high because patients have little faith in inexpensive treatments. E. Semi placebos-drugs that contain only a small amount of the usual dosage-are even more effective curatives than either the placebo or the full-strength drug
Soal 34	A forgotten issue in urbanism is land use during the night time, with problems such as noise and dirt, could be improved with information form Twitter. At least this is what Enrique and Vanessa Frias-Martinez believe, computer science researchers at Telefonica Research and the University of Marryland (USA) respectively, who have suggested using geolocalized tweets for urban planning and land use. Enrique Frias-Martinez explained that geolocalized tweets can be very use ful source of information for planing since it is an activity carried out by a large number of people who provide information on where they are at aspecific time what they are doing. The researcher points out that thanks to increased use of smartphones, social networks like Twitter and Facebook have made it possible to access and produce information ubiquitously. These networks generate tags with the event's geolocation. The new technique "automatically determines land use in urban areas by grouping together geographical regions with similiar patterns of Twitter activity", says the researcher. Using aggregate activity of tweets, the Frisa-Martinez siblings have studied land use in Manhattan, Madrid, and London. In the first two cases they identified four uses; residential, bussines, day time leisure (mainly parks and touris areas) and nightlife areas. The study has determainded that, in Madrid, night-time tweet activity is concentrated on weekends and in Manhattan, on weekdays. On the other land, London is chracterized by its tweeting activity in daytime leisure areas.

	This text would probably be found in... A. a popular science magazine B. a brochure C. an academic journal D. a news letter E. a tabloid
Soal 35	Read the following the text, then choose the correct answer by crossing A, B, C, D OR E! Teks Chickenpox is a highly contagious infectious disease caused by the Varicella zoster virus; sufferers develop a fleeting itchy rash that can spread throughout the body. The disease can last for up to 14 days and can occur in both children and adults, though the young are particularly vulnerable. Individuals infected with chickenpox can expect to experience a high but tolerable level of discomfort and a fever as the disease works its way through the system. The ailment was once considered to be a “rite of passage” by parents in the U.S. and thought to provide children with greater and improved immunity to other forms of sickness later in life. This view, however, was altered after additional research by scientists demonstrated unexpected dangers associated with the virus. Over time, the fruits of this research have transformed attitudes toward the disease and the utility of seeking preemptive measures against it. The following best expresses the essential information in the highlighted sentence is ... A. U.S. parents believed that having chickenpox benefited their children B. U.S. parents believed that chickenpox led to immunity against most sickness C. U.S. parents wanted to make sure that their children developed chickenpox S. U.S. parents did not think that other vaccinations were needed after chickenpox D. Scientists don't follow up on the assumptions of U.S. parents. that chickenpox is a child's immune-boosting ritual

Soal 36	Read the following the text, then choose the correct answer by crossing A, B, C, D OR E! Text 5 (1) Throughout history, people have been the victims of the pickpokets. Today, pickpocketing is one of the most rapidly increasing crime. Pickpockets are increasing in number and developing better methods to practice their skills. Approximately, one million American loose money to pickpockets. His victims, or 'marks' as they called, can be rich or poor, young or old. (2) During the eighteenth century, pickpockets were hanged in England. Large crowds of people would gather to watch the hanging, which was supposed to be the warning for the other pickpockets. However, in time, this practice was discontinued. The reason: while people attentively watching the hanging of a pickpocket, other pickpockets skillfully stole the money from the spectators! (3) Police officials say that the most efficient pickpockets come from South America. Many of these expert pickpockets are trained in special schools called Jingle Bells Schools. A pickpocket graduated from J.B.S. when he is able to steal a wallet from a dressed dummy (mannequin) that has bells inside his pockets. (4) Even the most well-dressed, respectable person can be a pickpocket. Some of the favorite places are banks, airports, race tracks, supermarkets, elevators, trains and bus stations. Oftenly, some pickpockets are working together with other pickpockets as a partner. Another kinds of pickpocket works outside or inside the bars and specialized in stealling from women is called 'purse snatcher! (5) To avoid being the victim of the pickpocket, it is important to be very cautious and alert when in the midst of a large gatherings of people. Pickpocketing is a... crime. A. an old B. a modern C. a temporary D. a contemporary E. a temporary old
Soal 37	Read the following the text, then choose the correct answer by crossing A, B, C, D OR E! Text (1) The film is Roland Emmerich's filn of-days prophecies for their doomsday scenario. It imagines the world coming to an end of his year.

	(2) The film brings off a series of wonders. The movie hits its peak early on. It starts when Cusack drives a limo through the streets of Los Angeles as freeways and skyscrapers crumble all around him from the shock of a 10.5 earthquake. The preposterous flying sequence is equally thrilling. The climax occurs aboard the giant ark, when an equipment malfunction almost threatens the entire mission. (3) Unfortunately, the crucial sequence is not filmed or edited with the requisite clarity. In this film, Emmerich leaves us befuddled as to exactly what is happening to whom. However, Emmerich' film deserves credit for offbeat casting. Cusack supplies his trademark hangdog charm. McCarthy has perhaps his best role ever as Peet's cocky. Danny Glover lends dignity to the role of the tormented president. Chiwetel Ejiofor, as the chief scientist, brings a moving sense of anguish to a stock role. Platt has fun playing the villain of the piece, and Woody Harrelson also chews the scenery as a bug-eyed radio prophet trying to warn his listeners about Armageddon. (3) All in one, the film's cinematography, production design and visual effects are awards-worthy. Music also propels the movie. It presents American Idol runner-up. Adam Lambert, who provides a rousing anthem over the end credits. The text is mainly about.... A. the film display B. a series of the film C. Roland Emmerich's film D. American Idol runner-up E. the film's cinematography
Soal 38	Read the following the text, then choose the correct answer by crossing A, B, C, D OR E! Teks (1) In almost every developing country, the lack of adequate supplies of cheap, convenient and reliable. Fuel is a major problem. Rural commodities depend largely on kerosene, wood, and dung for their cooking and lighting needs, but kerosene is now priced out of reach of many people, and wood, except in heavily forested areas, is in short supply. The search for firewood occupies a large part of the working day and has resulted in widespread deforestation. (2) Dung is in constant supply wherever there are farm animals and when dried, it is convenient to store and use. But burning dung destroys its value as fertilizer, thus depriving the soil of a much-needed source of humus and nitrogen. Rural areas of developing countries are also plagued by a lack of adequate sanitation, improper waste disposal spreads disease, contaminates water sources, and provides feeding grounds for disease-carrying insects.

	(3)The problem of improving environmental hygiene, conserving sources, and finding alternative sources of fuel may be unrelated. Their solution, however, is not, as many countries experimenting with biogas technology are discovering. Biogas, a mixture of methane and carbon dioxide, is produced by anaerobic fermentation is a natural one. Occurring whenever living matter decomposes. By keeping the matter and the process in a digester or biogas plan, the combustible gas can be trapped and used as fuel for household lighting and cooking. The digested slurry that remains can be used on the land as a soil conditioner and fertilizer. The two problems mentioned in the text is …… A. Pollution and the high price of fuel B. Widespread deforestation and the use of dung C. The lack of adequate fuel and hygienic conditions D. The lack of humus and nitrogen in the soil E. Contaminated water sources and rural areas
Soal 39	Read the following the text, then choose the correct answer by crossing A, B, C, D OR E! Teks 5 (1) United States citizens have always had a problem relating to the colonial period of their history. They have often thought that earlier period to be less relevant, less historically significant, than the later national period of their history. (2) For many, the colonial era lacks seriousness; it seems trivial and antique and shrouded in nostalgia. For much of United States history, popular opinion has considered the century and a half of the colonial period to be simply a quaint prolog to the main story that followed the American Revolution. (3) In part this is because the colonial period has become a natural source of folklore and mythmaking. Since the United States, unlike older Western nations, lacks a misty past in which the historical record is remote and obscure, people have tended to transform authentic historical figures and events of the colonial past into mythical characters and legends. (4) Unlike England we have no King Canute, no King Arthur, no Robin Hood to spin tales and legends about. Instead, we have transformed John Smith and Pocahontas, the Pilgrim Fathers, and Squanto (historical figures about whom we know a great deal) into fanciful and fabulous characters. But such has not always been the case. In the decades following the Revolution, the colonial period was an integral and important part of history.

	The primary purpose of this passage is to …. A. argue that colonial history had no influence on later periods in United States history. B. demonstrate that the colonial history of the United States is a mixture of legends and myths. C. present a rationale for teaching future generations of people in the United States about colonial history. D. explain why many people in the United States perceive colonial history in a particular way. E. suggest that a general ignorance of colonial history has caused people to repeat the mistakes of that era.
Soal 40	Read the following the text, then choose the correct answer by crossing A, B, C, D OR E! This text to answer the questions number 11 – 15 ! Text 3 (1) Situated on steep slopes, montane and watershed forests are especially important in ensuring water flow and inhibiting erosion. Yet, during the 1980s, mountains formations suffered the highest deforestation rate of tropical forests. (2) When the forest are cut down, less moisture is evapotranspired into the atmosphere resulting in the formation of fewer rain clouds. Subsequently there is a decline in rain clouds. Subsequently there is a decline in rainfall, subjecting the area to drought. Today Madagascar is largely a red, treeless desert from generation of forest clearing with fire. River lows decline and smaller amount of quality water reach cities and agricultural lands. Colombia, once second in the world with freshwater reserves has fallen to 24th due to its extensive deforestation over the past 30 years. Excessive deforestation around the Malaysian capital of Kula Lumpur, combined with the dry conditions created by El Nino triggered strict, water rationing in 1998, and for the first time the city had to import water. (3) There is serious concern that widespread deforestation could lead to a significant decline in rainfall and trigger a positive feedback process of increasing desiccation for neighboring forest cover. The newly desiccated forest becomes prone to devastating fires. Such fires materialized in 1997 and 1998 in conjuction with the dry conditions created by el Nino. Millions of acres burned as fires swept through Indonesia, Brazil, Colombia, Central America, Florida, and other places. The Woods Hole Research Center warned that more than, 400.000 square kilometers of Brazilian Amazonia were highly vulnerable to fire in 1998.

	The writer tries to inform the readers about… A. The effects of erosion B. The impact of deforestation C. The decrease of rain forests D. The excessive explorations of forests E. The issues on several tropical forests
Soal 41	In this little tiny called a cigarette, lies more than 4000 dangerous substances that will lead those who smoke it to death. Imagine, 4,000 deadly substances! Are those 4,000 evil substances not enough to make us stop smoking? I wonder why people are still smoking cigarettes. Among those substances, there is nicotine, the substance that causes addicted to smoke over and over again; tar, the substance that causes lung cancer; carbon monoxide, that substance that blocks oxygen circulation within the blood; and carcinogen, the main actor of all cancer caused by smoking. People who smoke cigarettes, smokers, actually know the information. But again, I still wonder why they do smoke. Those terrible things about smoking are not the worst thing. The super worst thing about smoking is the passive smokers. Yeah, the bad effects of the smoking habit are not only for those who smoke (active smoker) but also for those innocent people wo inadvertently inhale the smoke cigarettes. Passive smokers receive that bad effect of smoking even three times bigger than active smokers themselves. Just remember our beloved one who don't smoke, our friends, our family, or our children. Are they really deserve all bad things of that we have done? Indeed, the habit of smoking is not as easy to stop it . It needs great effort and courage. But we can start to stop smoking right now with a healthy life-style. Remember all the bad things that we will get if we still consume cigarettes. Remember those innocent the passive smokers who will get the same misfortune if they inhale the poisonous smoke we produce. Remember our children, family, and friends who will be damaged if they are near us still smoke. Just remember all those things and please stop it. The topic of the text above is… A. the danger of smoking B. the benefit of smoking C. the effect of selling cigarette D. the danger of selling the cigarette E. the danger of lung cancer

Soal 42	One day, a young farm boy named eragon finds a blue stone while hunting and tries to sell it for money. Unsuccessful in his attempts, he takes the stone back to his cabin and lets it sit there until it hatches into a beautiful blue dragon. Eragon realizes he can talk to this secret heroes called the Riders. With the help of brom, a wise man, Eragon matures into his destiny. The challenges he faces include fighting a long-standing war, helping an ethereal elf, and dealing with tragedy and revenge. Certain details, such as Eragon's revelation that he cannot read, develop this rich work and blend together to produce a number of plot twists. The story builds suspense steadily until the end. Remarkably, author Chrisoper Paolini began writing Eragon at the age of 15. Now 19, he has already established himself a an exciting new creator whose influence include Tolkien, Mccaffrey, and others. His world is intricate, his characters believable, and his writing engaging. Both casual readers and hardcore fans of fantasy and science fiction novels will be enchanted by this well crafted fantasy and unquestionably will look forward to part two and three of this exciting trilogy. What is the topic of the text… A. A dragon pet B. History of dragon C. The novel of Eragon D. A story of a farm boy E. A biography of Christopher.
Soal 43	Read the following the text, then choose the correct answer by crossing A, B, C, D OR E! Text (1) Parents send their children to school with the best of intentions, believing that formal education is what kids need to become productive, happy adults. Many parents do have qualms about how well schools are performing, but the conventional wisdom is that these issues can be resolved with more money, better teachers, more challenging curricula, or more rigorous tests. But what if the real problem is school itself? The unfortunate fact is that one of our most cherished is, by its very nature, failing our children and our society. (2) Children are required to be in school, where their freedom is greatly restricted, far more than most adults would tolerate in their workspaces. In recent decades, we have been compelling them to spend ever more time in this kind of setting, and there is strong evidence that this is causing psychological damage to many of them. And as scientists have investigated how children naturally learn, they have realized that kids do so most deeply and fully, and with greatest enthusiasm, in conditions that are almost opposite to those of school.

	(3) Compulsory education has been a ixture of our culture now for several generations. President Obama and Secretary of Education Arne Duncan are so enamored of it that they want even longer school days and years. Most people assume that the basic design of today's school emerged from scientist evidence about how children learn. But nothing could be further from the truth. (4) Schools as we know them today are a product of history, not of research. The blueprint for them was developed during the Protestant Reformation, when schools were created to teach children to read the Bible, to believe Scripture without questioning it, and to obey authority igures without questioning them. When schools were taken over by the state, made compulsory, and directed toward secular ends, the basic structure and methods of teaching remained unchanged. Subsequent attempts at reform have failed because they have not altered basic blueprint. The top down, teach-and-test method, in which learning is motivated by a system of reward and punishments rather than by curiosity or by any real desire to know, is well designed for indoctrination and obedience training but not much else. It is no wonder that many of the world's greatest entrepreneurs and innovators either left school early (like Thomas Edison) or said they hated school and learned despite it, not because of it (like Albert Einstein). The topic of the text above is … A. Parents' expectation on reformation in American school system. B. Doubts on the effectiveness of American schools systems. C. Restrictions on children's freedom at the US schools. D. Regulations for American children to stay longer at schools E. Many of the world's greatest entrepreneurs and innovators are left school early.
Soal 44	Read the following the text, then choose the correct answer by crossing A, B, C, D OR E! Text (1) Throughout history, people have been the victims of the pickpokets. Today, pickpocketing is one of the most rapidly increasing crime. Pickpockets are increasing in number and developing better methods to practice their skills. Approximately, one million American loose money to pickpockets. His victims, or 'marks' as they called, can be rich or poor, young or old. (2) During the eighteenth century, pickpockets were hanged in England. Large crowds of people would gather to watch the hanging, which was supposed to be the warning for the other pickpockets. However, in time, this practice was discontinued. The reason: while people attentively watching the hanging of a pickpocket, other pickpockets skillfully stole the money from the spectators!

	(3) Police officials say that the most efficient pickpockets come from South America. Many of these expert pickpockets are trained in special schools called Jingle Bells Schools. A pickpocket graduated from J.B.S. when he is able to steal a wallet from a dressed dummy (mannequin) that has bells inside his pockets. (4) Even the most well-dressed, respectable person can be a pickpocket. Some of the favorite places are banks, airports, race tracks, supermarkets, elevators, trains and bus stations. Oftenly, some pickpockets are working together with other pickpockets as a partner. Another kinds of pickpocket works outside or inside the bars and specialized in stealling from women is called 'purse snatcher! (5) To avoid being the victim of the pickpocket, it is important to be very cautious and alert when in the midst of a large gatherings of people. "... other pickpockets skillfully stole the money from the ***spectators***!" The similar meaning of the italic word is.... A. people B. victims C. South American D. Audiences E. passangers
Soal 45	Read the following the text, then choose the correct answer by crossing A, B, C, D OR E! Text (1) How does ritual affect relationships between groups and entities external to them? According to traditional cultural anthropology aggregates of individuals who regard their collective well-being as dependent upon a common body of ritual performances use such rituals to give their members confidence, to dispel their anxieties, and to discipline their social organization. Conventional theories hold that rituals come into play when people feel they are unable to control events and processes in their environment that are of crucial importance to them. (2) In contrast, recent studies of the Tsembaga, a society of nomadic agriculturalists in New Guinea suggest that rituals do more than just give symbolic expression to the relationships between a cultural group and components of its environment, they influence those relationships in measurable ways. (3) Perhaps the most significant finding of the studies was that, among the Tsembaga, ritual operates as a regulating mechanism in a system of a set of interlocking systems that include such variables as the area of available land, necessary length of fallow periods, size of the human and pig populations, nutritional requirements of pigs and people, energy expended in various activities, and frequency of misfortune In one sense, the Tsembaga constitute an ecological

	population in an ecosystem that also includes the other living organisms and nonliving substances found within the Tsembaga territory. By collating measurable data (such as average monthly rainfall average garden yield, energy expenditure per cultivated acre, and nutritive values of common foods) with the collective decision to celebrate certain rituals, anthropologists have been able to show how Tsembaga rituals allocate energy and important materials. (4) The studies have described how Tsembaga rituals regulate those relationships among people, their pigs, and their gardens that are critical to survival control meat consumption, conserve marsupial fauna, redistribute land among territorial groups and limit the frequency of warfare. These studies have important methodological and theoretical implications, for they enable cultural anthropologists to see that rituals can in fact produce measurable results in an external world. (5) By focusing on Tsembaga rituals as part of the interaction within an ecosystem, newer quantitative studies permit anthropologists to analyze how ritual operates as a mechanism regulating survival. In the language of sociology, regulation is a "latent function of Tsembaga ritual, since the Tsembaga themselves see their rituals as pertaining less to their material relations with the ecosystem than to their spiritual relations with their ancestors in the past, cultural anthropologists might have centered on the Tsembaga's own interpretations of their rituals in order to elucidate those rituals, but since tools now exist for examining the adaptive aspects of rituals these anthropologists are in a far better position to appreciate fully the ecological sophistication of rituals both among the Tsembaga and in other societies. According to the text, the word misfortune (paragraph 3) can be replaced by … A. Happiness B. Adversity C. Poverty D. Sensitivity E. Firmness
