BAHASA INGGRIS

A manufacturer creates GMOs by introducing genetic material, or DNA, from a different organism through a process called genetic engineering. Most currently available GMO foods are plants, such as fruit and vegetables. All foods from genetically engineered plants on sale in the United States are regulated by the Food and Drug Administration (FDA). They must meet the same safety requirements as traditional foods.

There is some controversy over the benefits and risks of GMO (Genetically Modified Organism) foods. There are some discussions of the pros and cons of GMO crops by taking into account their potential effects on human health and the environment. Manufacturers use genetic modification to give foods desirable traits. For example, they have designed two new varieties of apple that turn less brown when cut or bruised.

The reasoning usually involves making crops more resistant to diseases as they grow. Manufacturers, also engineers, produce foods to be more nutritious or tolerant of herbicides. Crop protection is the main rationale behind this type of genetic modification. Plants that are more resistant to diseases spread by insects or viruses result in higher yields for farmers and a more attractive product. Genetically modification can also increase nutritional value or enhance flavor. All of these factors contribute to lower costs for the consumer. They can also ensure that more people have access to quality food.

1. What is the best tittle for the passage?
   (A) Controversy around modified crops
   (B) Genetically modified organism
   (C) Flavourful food
   (D) Manufactured genetic engineering
   (E) Food and its safety
2. How genetic food can be able to sell on market in United States?
   (A) they must sign in to government office
   (B) they must meet regulated standart
   (C) the crops should be fresh and pesticides
   (D) the farmer took it on the fridge for 24 hours earlier
   (E) the food should be sold online
3. What is the main idea of paragraph 2?
   (A) many believe that GMO could lead to cancer
   (B) GMO foods contains extra nutritions compared to non-GMO foods
   (C) people tends to buy fresh fruits even it is expensive
   (D) some arguments about GMO foods for health and environment
   (E) example of GMO
4. The word **bruised** in line 12 could be best replaced with the word ....
   (A) Decayed
   (B) Black and blue
   (C) Corrupted
   (D) Effloresced

(E) color

5. What is the author's tone of the passage above?
   (A) happy
   (B) questioned
   (C) informative
   (D) contradictive
   (E) Persuasive

Ocean conservationists from watchdog group Oceana are hunting for illegal fishing activity, and one new method they _____ (6) for catching offenders is satellite data. The data _____ (7) from a monitoring network called the Automatic Identification System, or AIS. AIS was established so large ships _____ (8) their locations and avoid collisions.

In a new report from Oceana, researchers detail examples of how they used AIS collected by conservation group Global Fishing Watch to track four fishing vessels that were "going dark," or trying to avoid detection. They say the case studies are examples of how AIS data can be used to track illegal fishing activities in the future. Illegal fishing also _____ (9) a number of marine protected areas that are set up to restrict fishing activities in order to _____ (10) marine animal populations healthy, but which may be difficult for many countries to patrol.
